Portfolio Management Team

Anthony Trzcinka, CFA®, Portfolio Manager Nathan Moser, CFA®, Portfolio Manager Andrew Braun, Portfolio Manager Peter Schwab, CFA®, Portfolio Manager A multi-asset ESG strategy that utilizes a dynamic, risk-focused asset allocation approach and diversifies across a broad range of Pax funds.

• The Fund's investment objective is to seek income and conservation of principal and, secondarily, long-term growth of capital.

Q3 2019

- The first mutual fund in the United States to employ a sustainable investing approach.
- Utilizes a dynamic, risk-focused asset allocation approach based on the portfolio managers' view of overall market risk, economic data, earnings trends and relative market valuations.
- Invests in Pax's broad sustainable investing platform to diversify across a variety of U.S. equity, U.S. fixed income, developed international equity, and global thematic investment strategies.
- Offers impact across a range of sustainability issues from the environment to gender equality through full ESG integration
 within each underlying fund, compelling thematic strategies, direct high impact investments and shareholder engagement
 initiatives

On December 12, 2016, the Pax Balanced Fund converted to a fund of funds asset allocation structure. The Fund continues to have the same investment objective, portfolio management team, strategic asset allocation and expenses; however, now the Fund's asset allocation components are fully invested in Pax World Funds rather than a combination of individual securities and mutual funds.

RISK: The Pax Balanced Fund is a fund-of-funds. The funds' allocations may change due to market fluctuations and other factors. Equity investments are subject to market fluctuations, the fund's share price can fall because of weakness in the broad market, a particular industry, or specific holdings. Yield and share price will vary with changes in interest rates and market conditions. Investors should note that if interest rates rise significantly from current levels, bond fund total returns will decline and may even turn negative in the short term. Mortgage related securities tend to become more sensitive to interest rate changes as interest rates rise, increasing their volatility. There is also a chance that some of the fund's holdings may have their credit rating downgraded or may default. Investments in smaller companies generally will experience greater price volatility. Emerging market and international investments involve risk of capital loss from unfavorable fluctuations in currency values, differences in generally accepted accounting principles, economic or political instability in other nations or increased volatility and lower trading volume.

You should consider a fund's investment objectives, risks, and charges and expenses carefully before investing. For this and other information, call 800.767.1729 or visit www.paxworld.com for a fund prospectus and read it carefully before investing.

CFA® is a trademark owned by CFA Institute.

¹Weighted Average is an average in which each quantity to be averaged is assigned a weight. These weightings determine the relative importance of each quantity on the average.

²Duration is a measure of a security's price sensitivity to changes in interest rates. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

³Years to Maturity (weighted average) is the number of years until the bond matures and/or expires.

⁴Sharpe ratio determines a risk-adjusted return using standard deviation; a high Sharpe ratio indicates greater return per unit of risk and demonstrates if performance was based on smart investments or on excess risk.

Performance data quoted represent past performance, which does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. For most recent month-end performance information visit www.paxworld.com.

§The Morningstar style box is a nine-square grid that classifies securities by size along the vertical axis and by style (value and growth characteristics) along the horizontal axis. Morningstar's equity style methodology uses a building block, holdings-based approach. Funds are classified as large, mid, or small based on the market capitalization of its portfolio holdings. Style is determined at the stock level and then those attributes are rolled up to determine the overall investment style of a fund.

ØFigures include reinvested dividends, capital gains distributions, and changes in principal value.

† Inception of Institutional Class shares is April 2, 2007. The performance information shown for Institutional Class shares represents the performance of the Individual Investor Class shares for the period prior to Institutional Class inception. Expenses have not been adjusted to reflect the expenses allocable to Institutional Class shares. If such expenses were reflected, the returns would be higher than those shown. Institutional Class Inception date return since April 2, 2007 is 5.17 (annualized).

The S&P 500 Index is an unmanaged index of large capitalization common stocks. One cannot invest directly in an index.

*The Blended Index is comprised of 60% S&P 500 Index and 40% Bloomberg Barclays U.S. Aggregate Bond Index. The S&P 500 Index is an unmanaged index of large capitalization common stocks. The Bloomberg Barclays U.S. Aggregate Bond Index represents securities that are U.S. domestic, taxable and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities and asset-backed securities. One cannot invest directly in any index

~Morningstar Allocation 50% to 70% Equity portfolios seek to provide both capital appreciation and income by investing in three major areas: stocks, bonds and cash. These portfolios tend to hold larger positions in stocks than conservative-allocation portfolios. These portfolios typically have 50% to 70% of assets in equities and the remainder in fixed income and cash.

⁵Standard Deviation measures a fund's variation around its mean performance; a high standard deviation implies greater volatility.

⁶Beta reflects the sensitivity of a fund's return to fluctuations in its benchmark; a beta for a benchmark is 1.00: a beta greater than 1.00 indicates above average volatility and risk.

⁷Alpha is a coefficient measuring risk-adjusted performance, considering the risk due to the specific security, rather than the overall market. A positive alpha reflects relative risk-adjusted performance of a fund versus its benchmark.

⁸R-Squared is a measure of how much a portfolio's performance can be explained by the returns from the overall market (or a benchmark index).
